

ABSTRACTION LEVEL 2 - CROSS-FUNCTIONAL STRATEGIC COLLABORATION. Scope: referral intake and triage, new patient appointment booking, consultation and consent, and clinical authorisation of treatment. Activities are business activities, not keystrokes: each is attributed to the organisational unit accountable for it, and each carries a documentation element naming the operational sub-process it decomposes into. Only lanes that carry work in this scope are declared.

LINK TO THE DETAILED OPERATIONAL MODEL. The operational model O1_Operational_Merged implements this process at task level. Examples of the mapping: T_CheckDocumentation > O1 T_CheckReferralDocuments; T_RequestMissingDocs > O1 T_RequestMissingDocuments [Zeebe job request-missing-documentation, message flow MF_S2]; T_QuerySlots > O1 T_QueryAvailableSlots [job query-available-appointment-slots]; T_TelephonePatient > O1 T_TelephonePatient (conditional on appointmentWithin14Days); T_CreateAuthorisedRequest > O1 T_CreateTreatmentBookingRequest. An activity with no operational counterpart is a gap, not an implementation.

BUSINESS RULES MODELLED AS GATEWAYS AND CONSTRAINTS. Only an authorised Consultant may judge clinical suitability or accept a referral, and the reason and decision maker must be recorded (T_RecordDecision). A New Patient Appointment may only be arranged after an authorised acceptance (G_RequestAuthorised and F_A14). The patient must also be telephoned when the appointment is due within 14 days (G_WithinFourteenDays). An appointment is never booked solely outside the period requested by the Consultant (T_ResolveCapacity). A Treatment Booking Request that is incomplete or unauthorised must not be processed by administrative staff (G_RequestAuthorised).
